Indian River County, Fla. – The Florida Department of Health in Indian River (DOH-Indian River) has issued a rabies alert for Indian River County. This rabies alert is for 60 days and includes the following boundaries:

- Barrier island south of State Road 510 also known as Wabasso Road
- Barrier island north of Round Island Park
- West of Atlantic Ocean
- East of Indian River Lagoon

This rabies alert is in response to a raccoon that tested positive for rabies on June 2nd. The raccoon attacked a person and their domestic cat on May 29th. It is important that you contact the DOH-Indian River immediately if you have been bitten or scratched by a raccoon or outdoor domestic cat in the previous two weeks in the geographic boundary of the rabies alert.

All residents of Indian River County should be aware that rabies is present in the wild animal population and domestic animals are at risk if not vaccinated. The public is asked to maintain a heightened awareness that rabies is active in Indian River County. Alerts are designed to increase awareness of the public, but they should not give a false sense of security to areas that have not been named as under an alert.

Health officials urge residents to protect themselves from the risk of rabies exposure by avoiding contact with wild and stray animals and vaccinate their pets against rabies. Pets should be kept indoors or leashed when outside. The Health Department cautions residents not to feed pets outdoors, as this attracts wild and stray animals. “We strongly advise residents not to approach or feed wild and stray animals, and to keep their pets rabies vaccinated and restrained,” said Miranda Hawker, Indian River County Health Officer.

An animal with rabies could infect domestic animals that have not been vaccinated against rabies. All domestic animals should be vaccinated against rabies and all wildlife contact should be avoided, particularly raccoons, bats, foxes, skunks, otters, bobcats, and coyotes. Outdoor domestic cats that compete with wild animals for food sources are at risk for getting rabies.

Rabies is a disease of the nervous system and is fatal to warm blooded animals and humans. The only treatment for human exposure to rabies is rabies specific immune globulin and rabies immunization. Appropriate treatment started soon after the exposure will protect an exposed person from the disease.
Here are some tips to protect you and your pets from rabies:

- Persons who have been bitten or scratched by wild or domestic animals should seek medical attention and promptly report exposure to local animal control.
- Do not handle, feed, or unintentionally attract wild or stray animals, including cats, by leaving pet food outside or garbage cans open.
- Keep rabies vaccinations up to date for all pets.
- Do not allow your pets to run free. Follow leash laws by keeping pets secured on your property.
- If your pet is bitten by a wild, stray, or unknown animal, seek veterinary assistance immediately and report the incident to your local animal control agency. (See contact information below).
- Call your local animal control agency directly to remove any wild or stray animals from your neighborhood that are injured or demonstrate unusual behavior.
- Never handle, adopt, or bring wild animals into your home. Call animal control for assistance rather than trying to nurse injured or sick wild or stray animals.
- Teach children never to handle unfamiliar animals, wild or domestic, even if they appear friendly.
- Prevent bats from entering living quarters or occupied spaces in homes, churches, schools and other similar areas, where they might come in contact with people and pets.
- Spay or neuter your pets to help reduce the number of unwanted pets that may not be properly cared for or regularly vaccinated.
- Local animal control agencies in Indian River County coordinate the exposure investigation with the Florida Department of Health in Indian River County.
